

**Amendment to Abstract under 37 C.F.R. §1.121**

*Please replace Abstract with:*

~~“The present invention relates to a A one touch-type stopper operable with one hand is provided. for convenience of use thereof through easy opening and closing thereof, and a container having the stopper. The one touch-type container stopper of the present invention comprises a hermetically sealing part (110) which has, at a lower end thereof, a plurality of first supporting protrusions (111) formed to protrude inwardly such that they are elastically supported along an outer peripheral surface of a mouth of the container and is fitted around the mouth to seal the container; and a cover part (120) which has a hinge part (121) formed integrally with and extending from the first supporting protrusions and then bent, and a plurality of second supporting protrusions (122) at a lower end thereof to protrude inwardly therefrom and is positioned outside of the sealing part 110. The second supporting protrusions (122) are connected to one another through a band member (123). According to the present invention, after first opening of the stopper, it can be checked whether the stopper has been opened. Even when contents remain in the container, the container can be easily sealed again. Thus, the present invention has an effect of convenience of use.”~~
